M2N61-AX motherboard specifications. Support for the 64 X2 Dual-Core. Athlon 64, Sempron processor processor. Outlet Type Outlet AM2 Chipset NVIDIA GeForce 6150SE - nForce 430 (MCP61P) Integrated Graphics GeForce 6150 SE Memory 4 x 240-Pin DDR2 DIMM slots supports dual channel DDR2 800/667 MHz non-ECC, NOT Buffer Memory (Max 4GB) Expansion Slots 1 x PCI Express x16 1 x PCI Express x1 x PCI Storage 4 x SATAII 3Gb/s connectors supports HDDs, Internal Solid Drive (SSD) Audio Realtek ALC888S - High Definition Ethernet Realtek RTL8201N - 10/100Mb/s Back Panel 1 x VGA Port 1 x Audio I/O 1 x RJ45 LAN Port 4 x USB Ports Internal 3 x USB Beaters 1 x Clear CMOS Battery 1 x Battery (3V) 1 x 4-pin CPU fan connector 1 x 3-pin connector SYS Rear Fan 1 x 4-pin atx 4-pin connector ATX 12V Power 1 x 24-pin ATX Power 1 x Front Audio Headline 1 x Front 1 x Floppy Connector Connector Bios Form Micro-ATX Dell/Asus M2N61-AX Motherboard support: Win 7, Vista/XP, Ubuntu. The manual is not available for this board. I have the M2N61-AX from Dell Inspiron 531 and would like to know how many GBs can I put on one slot from my 4 slots? I found the DDR2 4GB stick online ! (4GO DDR2 PC2-6400 800mhz Dimm desktop M'moire Ram 4GB DIMM for AMD Motherboard) will this fonction? I mean buying 2 for 8GB 0 Type 667-MHz, 800-MHz DDR2 SDRAM Memory Connectors four memory capacity 512MB or 1GB Minimum Memory 512 MB Maximum Memory 4GB, so I can't make one stick with 4Gb, only 1GB slot. That's right? 0 thank you very much ! Page 2 Hello, so I had problems with my processor causing my computer BSOD. Well, I saw my BIOS had 5 versions or so of the old one, so I updated it and now I have no more problems with the processor. Now when I download my computer it signals long 1 time and short 4 times then it goes to that screen and it says I have a CPU fan error, but my fan works fine. Also, to get out of this screen I have to hit F1 to go to install when I get to install I have to get out of the installation and then it loads OS. Everything seems to be working fine except for said problems. Any help is appreciated, thank you! Processor: i7-4790k Mother: Asus z87 Maximus Hero VI Ram: 16gb gskill GPU: NVIDIA Geforce gtx 970 0 The same thing happens on another PC here. I'm not worried about that. If it comes up I just click F1. And it continues It doesn't happen all the time tho 0 Hi, try to reduce in BIOS the minimum speed of the fan processor (monitor menu, I think). 0 you checked this also you have cool and quiet on turn it off. 0 Hi, try reducing the BIOS minimum CPU fan speed (monitor menu, I guess). I lowered it to 200, and I still Message. 0 you checked this also you have cool and quiet on turn it off. I lowered it to 200 and it doesn't work, nor is it in silent mode. 0 In addition, it has an aftermarket fan there that is in the CPU OPT, not a CPU FAN input on the motherboard. I'm not sure this has anything to do with 0 The same thing happens on another computer here. I'm not worried about that. If it comes up I just click F1. And it continues it doesn't happen all the time tho 0 CPU fan should be on the TPU headline and not on the CPU pick. Page 3 So I built a cheap working computer for a friend using the AMD FX-4300 and Gigabyte GA-78LMT-USB3. He asked me if he could run 3 monitors. And I really have no idea how he says: Multi VGA Exit Options: D-Sub, DVI-D and HDMI However I asked a colleague at work and he says he won't run 3 monitors. Will I be able to buy dirt cheap GFX cards and use internal HDMI and DVI-D and then external aswell graphics cards? 0 For the notes at the bottom, you can't use HDMI and DVI at the same time, so you'll need a graphics card to use 3 monitors: This board doesn't seem to support using onboard graphics along with the graphics card. So you'll need a PCI-E graphics card that supports 3 monitors and has outlets (HDMI, DVI, etc.) that match the monitor inputs. You will probably end up needing adapters as I doubt you will find a cheap card with 3 of the same outputs. 0 What budget do you work with? 0 I didn't even know it. I just built it a budget system and now he just said, Oh, I want to run 3 monitors if I knew this at the beginning when I built it, I could pay more attention. To be honest, as cheap as humanly possible. It's not a game or anything on it. Thank you for your help to BTW. Page 4 Since I played today my PC screen has blackened and the lights with the keyboard and mouse have gone. I tried to reboot and it downloaded the bios well, but after getting into the desktop it did the same. After a while he couldn't even download the bios. So the computer now just turns on, gives a signal to the screen to turn on, but it shows nothing. Also, I can't hard turn it off by pressing the off button. It just stays open. Sounds like a matter of motherboarding? 0 Update: My computer turned on and did the repair/format and seemed good so far. But he's starting to do the same thing now. 0 welcome to that latest bloody update from MS. I had the same problem and you find after 5-6 reboots, you get a horrifying error message about your MBR time not to go and you want to use your secondary MBR... (This is your hint to support your stuff on the external drive and prepare to reformat/reset the windows...) like I should have just done 2 days ago because of this update that came across... but since, and updating it from a fresh copy all is well again. I tried /f/mbr, deleting the latest KB updates etc etc on it and then decided to repaint it. 0 welcome to that latest bloody update from MS. I had the same problem and you find after 5-6 reboots, you get a horrifying error message about your MBR time not to go and you want to use your secondary MBR... (This is your tip to support your stuff on the drive and prepare to reformat/reset the windows...) like I should have just done 2 days ago because of this update that came across... but since, and updating it from a fresh copy all is well again. I tried /f/mbr, deleting the latest KB updates etc etc on it and then just decided to repaint it. The thing is, it doesn't even load the bios, so I don't think it has to do with the windows. I did the repairs when it booted where the windows removed everything in my drive and got installed again. What do you think? Chipset - NVIDIA GeForce 6150SE - nForce 430 (MCP61P) Integrated Graphics - GeForce 6150 SE Memory - 4 x 240-contact slots DDR2 DIMM support dual channel - DDR2 800/667 MHz, non-ECC, NON-buffer memory (Max 4GB) Expansion Slots No. 1 x PCI Express x16 - 1 x PCI Express x1 - 2 x PCI Audio - Realtek ALC888S - High Definition Ether net 8201N - 10/100Mb/s Rear Panel No 1 x VGA Port No 1 x Audio I/O No 1 x RJ45 LAN-port 1 x K CMOS Jumper No.1 x Battery Connector (3V) - 1 x 4-Pin CPU Fan Connector - 1 x 3-Pin Connector SYS Rear Fan Power Connector 1 x 1 x 24-pin ATX Power connector - 1 x front audio header - 1 x front title - 1 x Floppy Connector Form Factor - Micro-ATX This website or its third-party tools use cookies that are necessary for its functioning and are necessary to achieve the goals illustrated in the policy of cookies.
